

Good Day Everyone, I wanted to provide this update and remind everyone of the document resources that are available. Well, after a long waiting period, we finally have our next event scheduled. Field Event 5: October 16 through November 8, 2017. Focus is on surface water, sediment, and soil.

Community Availability Session: November 2-7, 2017.

Come-and-go session from 5:30pm to 7:00pm at the Bristol Public Library.

At present, data collected in 2016 and April 2017 have been received from the lab.

Phase 2 Mobilization 2 SAP has been finalized and is attached.

Please see listed below the accomplishments since the last update provided in October 2016. I have tried to list this beginning with the most recent.

1. Removal: EPA's removal team completed removal of oil waste material from a tank area located in the East Tank Farm. Approximately 1300 tons of material was removed, the area was backfilled with lean soil and re-vegetated.
2. RI field event 4: Completed during the weeks of April 10, April 17, and April 24, 2017. Soil sampling.
3. ODOT Final Report: Contaminated Material Management Plan Summary Report (January 12, 2017).
4. The Borehole Geophysics report (November 2016) and Final Wetland Report (February 2016) are available.
5. November 2016: ODEQ completed a survey for Naturally Occurring Radioactive Material. Results are below levels of concern. The memorandum is included on the Wilcox One Drive.
6. October 17, October 24, and October 31, 2016: completed a field event that resulted in the collection of a subset of the soil data, a subset of the surface water data, ground water residential wells, and vapor intrusion (air samples). Data are slowly being received from the lab. Data will be reviewed to assist with future activities and focus on relevant contaminants of concern.
7. The passive gas data was collected in August 2016. The final report has been received and is available for review on the Wilcox one drive folder. Data are being reviewed to assist with future activities and focus on relevant contaminants of concern.
8. The Surface Water field Sampling report and Site Photos from October 2016 are available on the Wilcox one drive folder.
9. The Site Sampling and Analysis Plan was finalized in September and shared on September 13, 2016. It is found on the website (see below) and in the Wilcox one drive folder.
10. The Wilcox Oil Company Web page now has documents available for download: early investigation reports, the Final SAP, the Final Direct Sensing and Geophysics Report, the final Architectural Cultural Report, and the community meeting slides, notes, fact sheets. Some of these documents are also on the Wilcox one drive site. For the one drive, you may need to create a user name and password to access.

As always, call either Todd or I with any questions, and thank you for your continued interest.
